PROFESSIONAL SUMMARY

Technical Product Manager & Software Architect with **7 years of experience** building scalable products and **sales, user, employee, security, storage, and processing monitoring systems** for industrial and e-commerce operations. Specialist in MERN architecture, high-availability AWS deployments, and production-ready code. Proficient in **Socket.IO & real-time WebSocket** implementations for enterprise-grade dashboards. Currently developing a cutting-edge application to create **Digital Twins from live video streams.** Delivers with 100% discipline — architectures that scale, systems that last, and code that performs under the heaviest loads.

Driving product lifecycle from technical architecture to business strategy. **GitHub Rank S+, the #1 ranked committer in Colombia** across public and private repositories, with a sustained 350-day commit streak and 22,000+ contributions in the past year. Engineers **high-availability double-cluster architectures** built for industrial-grade security and zero-downtime deployments. Builds full e-commerce dashboards for managing sales, inventory, users, employees, and internal messaging, alongside industrial-scale e-commerce platforms for product sales and inventory control — combining technical velocity with architectural discipline to ship reliable systems at scale. Also builds education platforms.

TECHNICAL ACHIEVEMENTS

- **High-Availability Double-Cluster:** Engineered dual AWS cluster architecture with full redundancy and industrial-grade security — zero-downtime production environments at scale.
- **Socket.IO & Real-Time Systems:** Designed and deployed WebSocket-based enterprise dashboards with sub-100ms latency, handling thousands of concurrent industrial data streams.
- **Video Digital Twin Innovation:** Actively building an application to generate interactive Digital Twins directly from live video feeds using computer vision, C++ and Python, and real-time MERN pipelines.
- **Mass Production Readiness:** Systems engineered for low-latency performance under heavy concurrent load, with full observability and monitoring embedded from day one.
- **Elite Velocity & Reliability:** 350-day unbroken commit streak · 22,000+ contributions · 45 active repos — the most active developer in Colombia, sustained and measurable.
